I. Basis of the re	epo	ort
--------------------	-----	-----

Description, Pages

1. With regard to the **elements** of the international application (Replacement sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to this report since they do not contain amendments (Rules 70.16 and 70.17)):

		51.p			
	1-37		as originally filed		
	Clai	ms, Numbers			
	1-22		as originally filed		
	Drav	wings, Sheets			
	1/6-6	6/6	as originally filed		
2.	 With regard to the language, all the elements marked above were available or furnished to this Authority in language in which the international application was filed, unless otherwise indicated under this item. 				
	The	se elements were ava	ailable or furnished to this Authority in the following language: , which is:		
		the language of a trai	nslation furnished for the purposes of the international search (under Rule 23.1(b)).		
		the language of publi	cation of the international application (under Rule 48.3(b)).		
		the language of a train Rule 55.2 and/or 55.3	nslation furnished for the purposes of international preliminary examination (under 3).		
3.	With inte	n regard to any nucle o rnational preliminary e	otide and/or amino acid sequence disclosed in the international application, the examination was carried out on the basis of the sequence listing:		
		contained in the inter	rnational application in written form.		
		filed together with the	e international application in computer readable form.		
		furnished subsequen	ntly to this Authority in written form.		
			ntly to this Authority in computer readable form.		
		in the international a	he subsequently furnished written sequence listing does not go beyond the disclosure pplication as filed has been furnished.		
		The statement that the listing has been furnitude.	he information recorded in computer readable form is identical to the written sequence ished.		
4.	The	e amendments have re	esulted in the cancellation of:		
		the description,	pages:		
		the claims,	Nos.:		
		the drawings,	sheets:

INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No.

PCT/GB 03/04749

Citations and explanations see separate sheet

The following documents (D) are referred to in this report; the numbering will be adhered to the rest of the procedure:

D1: US-A-5492816

D2: Journal Medicinal Chemistry, 1996, Vol. 39, Pages 5215-5227

D3: International Journal of Psychophysiology, 2001, Vol. 41, Pages 93-100

SECTION I

The subject matter of claims 15-16 have been not been the subject of 1. International Search, therefore they will accordingly not be subject of International Preliminary Examination (Rule 66.1(e) PCT).

SECTION III

Claims 12-14, 17 relate to subject-matter considered by this Authority to be 2. covered by the provisions of Rule 67.1(iv) PCT. Consequently, no opinion will be formulated with respect to the industrial applicability of the subject-matter of these claims (Article 34(4)(a)(i) PCT).

SECTION V

- Novelty (Article 33(2) PCT) 3.
- The subject matter of claim 22 is anticipated by D1. 3.1
 - D1 (page 4, lines 41-51) describes the measurement of superoxide anion by means of luminol using any standard spectrophotometer ("chemiluminometer" according to claim 22)
- 3.2 The subject matter of claims 1-14 and 17-21 including a psychological stressor in methods for determining whether an individual is experiencing changed physiological status (claim 1), or for screening for a stress relieving drug (claim 12) or a method for testing the efficacy (claim 17) are not disclosed in the prior art documents.
- Inventive Step (Article 33(3) PCT) 4.

D2 is considered as the closest prior art document. D2 (abstract; page 5227, left column, fourth paragraph) describes the effect of inhibitors on the PMA induced superoxide anion burst in neutrophils using a luminometer. Claims 1, 12 and 17 differ from D2 in they relate to psychological stressors in:

- method for determining changed physiological status (claim 1)
- method for screening a stress relieving drug (claim 12)
- method of testing the efficacy of a proposed stress-relieving treatment (claim 17)

The technical problem to be solved with respect to claim 1 would reside in finding an alternative way to assay the physiological status of an individual.

The skilled person, equipped with the knowledge of D2, would not be motivated to arrive at the subject matter of claim 1, despite that D3 learns that beside physiological stressors, mental stressors exist for increasing the superoxide anion production. However, the prior art does not show, that said stress exposure leads to less superoxide anion production in vitro after stimulation by an inducer compared to an unexposed control.

Therefore, claims 1-11 and 18-21 would appear to involve an inventive step and also claims 12-14, relating to methods of screening for compounds influencing the superoxide anion production of claims 1-11 and claim 17, relating to the efficacy of a proposed stress relieving treatment using a method in accordance to claims 2-11.

For the assessment of the present claims 12-14 and 17 on the question whether 5. they are industrially applicable, no unified criteria exist in the PCT Contracting States. The patentability can also be dependent upon the formulation of the claims. The EPO, for example, does not recognize as industrially applicable the subject-matter of claims to the use of a compound in medical treatment, but may allow, however, claims to a known compound for first use in medical treatment and the use of such a compound for the manufacture of a medicament for a new medical treatment.

In this context the passage "administering a test compound to an individual" or "exposing an individual to a psychological stressor" according to claims 12 and 17

INTERNATIONAL PRELIMINARY **EXAMINATION REPORT - SEPARATE SHEET**

International application No. PCT/GB 03/04749

is considered to cover treatment by surgery and therefore is a method of treatment.
